Woodhall's Weekly

Fed cuts for first time in a decade

- Fed cuts by 25 bps
- US nonfarm payrolls strong
- Aussie inflation subdued

Overview

The Fed had telegraphed its 25 bps rate cut for Wednesday but that didn't stop some pricing in a double cut. Trump had 'demanded' a 'big cut'. He doesn't always get what he wants!

Interestingly, CNBC TV reported the results of a survey they conducted the day before the cut. CNBC said that, while 95% of respondents expected a 25 bps cut, only 48% thought the Fed *should* cut.

As we have been writing for ages, the US economy is strong despite what some say. There was already a significant chance of an upside shock for the economy and now, with a cut in place, that chance hasn't gone down.

The market reaction to the Fed announcement was somewhat muted – until Powell started talking in the press conference. Under questioning from Bloomberg TV's Mike McKee – who suggested the Fed had acted like a hammer in search of a nail – the market started to fall. With Powell stating that this first cut was not necessarily the start of a trend, the market finished down about -1.4% on the day – and backed that up with further falls during the rest of the week.

The monthly nonfarm payrolls – shown in the chart of the week – came in overnight bang on expectations. The 164,000 new jobs print was only

1,000 under the consensus forecast. The unemployment rate stayed at 3.7% which is only one notch above the 50-year low. Wages growth even went one notch up at 3.2%.

Chart of the week: US nonfarm payrolls

This is an unquestionably strong labour market and inflation is bang on the Fed's target rate of 2%. The week before, the US GDP data drop showed that the US consumer is very strong with a +4.3% growth in consumer expenditure.

Powell's rhetoric and the data commentary have fallen on deaf ears. The CME Fedwatch tool has priced in a 96% chance of the Fed being on hold at the next meeting (September 18th) but, by the end of the year, there is no chance of no more cuts; a 25% chance of one more cut; a 50% chance of two more cuts and a 25% chance of three more cuts. Somebody is going to be very unhappy.

General Advice Warning: This note has been prepared without taking account of the objectives, financial situation or needs of any particular individual. Any individual should, before acting on the information in this note, consider the appropriateness of the information, having regard to the individual's objectives, financial situation and needs and, if necessary, seek appropriate professional advice. Past returns are no guarantee of future performance.

It is hard to separate out the Fed's impact on the market from Trump's latest trade threat. He's shooting (from the hip) for a 10% tariff on the remaining \$300m of goods imported. China snubbed its nose and started looking into sourcing its soya beans from South America instead of the US.

So, the issue is about business investment – which fell -5.5% in Q2's GDP print. The question is by how much will the tariff war impact on US growth further down the line? The Fed is not really meant to make pre-emptive cuts but, when it last did in the early nineties, the market rallied hard.

At home, it at last looks like Australian house prices have seen the worst. There might even be early signs of price increases. APRA can take some credit after it relaxed its recently implemented stricter credit controls on home lending. Well it certainly overachieved in slowing down prices! The recent two cuts in the RBA rate might further support house price growth.

But there were few signs of life in the latest Aussie inflation data. The headline figure was 1.6% and the core CPI result was 1.4%. That makes it 14 quarters on the run that inflation has been below the RBA target band of 2% to 3%.

As we wrote in our latest monthly – and in previous issues of this Weekly – if the Phillips curve is dead (to quote Powell on the relationship between unemployment and inflation) then the RBA is unlikely to have any major impact on inflation.

Over in China, the latest official manufacturing PMI was released. It came in at 49.7 (just a tad below the 50 that separates contraction from expansion). That was the third month in a row it was below 50 but 49.7 was up on the previous month and it beat expectations. China is not (yet?) showing any great signs of suffering from the trade war.

We rebalanced our portfolio on August 1st as we had flagged. There are now 20 stocks (from 23) in the portfolio and none of them are the big banks.

The new tables and charts are not yet fully checked. A lot of work goes into updating the software at each rebalance so a gremlin or two might have crept in. We'll sort it out over the weekend.

The rebalance resulted in selling completely out of 13 stocks and buying 10 new ones. Top ups were made to 9 existing stocks. The first day didn't go well but then Trump was in the mix. The previous rebalance added nearly 10% (not annualised) outperformance to the benchmark!

Market expectations

Our start-of-year 2019 eoy forecasts for the ASX 200 are given in Table 1 (left column) together with the latest calculations (right column) and last week's (middle column) for comparison. Chart 1 includes a trace of the index to compare with the forecast highs and lows.

Table 1: ASX 200 range forecasts 2018

| Forecast CY19 | Forecast origin | | |
|-------------------|-----------------|-------------|------------|
| | 31-Dec-2018 | 26-Jul-2019 | 2-Aug-2019 |
| Low | 5,450 | 6,500 | 6,500 |
| High | 6,600 | 7,200 | 7,200 |
| End | 6,400 | 6,900 | 6,900 |
| Fair value | 6,100 | 6,550 | 6,550 |
| Exuberance | -7.1% | 4.1% | 3.3% |
| ASX 200 | 5,646 | 6,793 | 6,769 |

Note: the latest forecasts in the right-hand column do not provide updates of the original forecasts in the left column of numbers. Rather the latest forecasts facilitate an assessment of the degree to which the original forecasts are on track, or not. Moreover, exuberance is assumed to be eroded over a 12-month period and so the 'latest' forecasts are less reliable the closer is the current date to the end-of-year and the greater is any mispricing.

Chart 1: Graphical representation of Table 1

Note: the low and high are based on 'normal' volatility levels. The 'high-volatility' low allows for well above normal volatility and a breach of which starts to suggest the base-line forecasts may no longer be relevant. The dashed black lines are derived from average volatility assumptions; the dot-dash line corresponds to high volatility.

The eoy forecast for 2019 (left-hand column in Table 1) was 6,400 with a forecast high of 6,600 and a forecast low under normal volatility of 5,450. The 'high-volatility' forecast low was 5,050. The updated eoy 2019 forecast (Table 1, last column) is 6,900. Fair value is 6,550.

It should be stressed that when markets are heavily mispriced, the speed with which mispricing is eroded is key to making a good forecast. In this table we assume that it takes 12 months to erode the mispricing which is possibly a very conservative assumption. Our eoy 2019 forecasts for the S&P 500 are given in Table 2. Because overnight data are not available to us until the afternoon, the latest data for Wall Street will usually be presented for the

day before the ASX 200 in this *Weekly* that we try to post at around 10am on a Saturday.

Table 2: S&P 500 range forecasts 2018

| Forecast CY19 | Forecast origin | | |
|--------------------|-----------------|-------------|------------|
| | 31-Dec-2018 | 25-Jul-2019 | 1-Aug-2019 |
| Low | 2,450 | 2,900 | 2,860 |
| High | 3,130 | 3,230 | 3,190 |
| End | 3,050 | 3,120 | 3,080 |
| Fair value | 2,900 | 2,940 | 2,950 |
| Exuberance | -13.3% | 2.2% | 0.1% |
| S&P 500 | 2,507 | 3,004 | 2,954 |

Note: see notes for Table 1.

Chart 2: Graphical representation of Table 2

Note: see notes to Chart 1.

Our original forecast for eoy 2019 was 3,050 with a high of 3,130 and a low of 2,450. The 'high-volatility' low was 2,300.

The updated eoy forecast for the S&P 500 is 3,080. Fair value is 2,950

Market stats

Our market volatility index (Chart A-1 to be found in the Chart Appendix) is below average at 9.4%. Our Fear Index (Chart A-2) is below the zone at 5.8%. The VIX stands above average at 17.6%. Our Disorder index (Chart A-3) is in the zone at 0.8%.

Our updated 12-month capital gains forecast (Chart A-4) is +8.0%. The market is just expensive at +3.3% (Chart A-5). So that leaves the adjusted rolling 12-month capital gains' forecast at +4.4%. The comparable 12-month adjusted capital gains forecast for the S&P 500 stands at about +11.5%.

Sector pricing (Chart A-6) is such that Staples (+7.6%), Health (+7.5%) and Property (+6.5%) are significantly overpriced – above the 6% line! The other sectors are, perhaps, not too expensive to buy. Materials corrected over the week to go from very expensive to only +2.5% overpriced.

Chart 3 shows an interesting angle on the yield play. Our composite yield sector (Financials-x-REITS, REITS, Telcos and Utilities) and the 'other' (seven) sector moved roughly together for 2015, 2016 and the first half of 2017. Since then the yield play went nowhere and slipped since mid-2018. However, yield is having a new lease of life after the May 2019 election. The 'other index' performed very strongly until October 2018. Since then the other sector fell strongly – then rallied in 2019 with high yield.

Chart 3: Total returns indexes for 'yield' and 'other' aggregated sectors

SMSF Share Portfolio

We last rebalanced our share portfolio in our SMSF on 1st August 2019. We kept the style at 100% High Conviction. There are 20 stocks in the portfolio. No adjustments were made to the new model portfolio prescription.

Table 3: Total returns from SMSF portfolio

| Period | Portfolio | ASX 200 | Alpha |
|------------------------|-----------|---------|-------|
| Since inception | 13.3% | 9.2% | 4.2% |
| 5 years | 12.9% | 8.7% | 4.2% |
| 3 years | 15.3% | 11.6% | 3.7% |
| 2 years | 19.2% | 13.3% | 5.9% |
| 1 year | 22.2% | 13.2% | 8.9% |
| 6 months | 25.6% | 17.9% | 7.7% |
| 3 months | 9.5% | 7.7% | 1.8% |

Note: Since June 25th 2014. Returns include dividends. For periods above one year, the returns are annualised.

The performance of domestic equities in our SMSF portfolio – including various rebalances – against the ASX 200 since late June 2014 is shown in Table 3. That corresponds to an outperformance of +4.2% p.a. (annualised) since inception. The portfolio has been returning +13.3% p.a.

In Table 4, we show the performance (including dividends) of the individual stocks since the last rebalance.

We have no stocks beating the index by more than 10% since August 1st 2019 and no stocks trailing by more than -10%.

Table 4: Individual stock total returns

| | | | | | | | | |
|---------------|------------|------------|------------|------------|----------------|------------|------------|------------|
| | ALL | ALQ | AMC | ANN | APT | AZJ | BHP | CSL |
| Return | -0.4% | -0.4% | 0.1% | -3.7% | -4.0% | -0.2% | -3.7% | 1.4% |
| Alpha | -0.1% | -0.1% | 0.4% | -3.4% | -3.7% | 0.1% | -3.4% | 1.7% |
| | FLT | LLC | MQG | PDL | RIO | RMD | RWC | S32 |
| Return | -0.9% | -0.3% | -1.5% | -2.9% | -3.1% | 2.5% | -2.8% | -3.8% |
| Alpha | -0.6% | 0.0% | -1.2% | -2.6% | -2.8% | 2.8% | -2.5% | -3.5% |
| | SEK | SGR | SUN | TWE | ASX200I | | | |
| Return | -0.4% | -2.2% | -0.5% | -0.7% | -0.3% | | | |
| Alpha | -0.1% | -1.9% | -0.2% | -0.4% | 0.0% | | | |

Note: Since August 1st 2019. Returns include dividends.

The returns chart (Chart 4) shows the recent performance using colours to denote rebalanced portfolios.

Chart 4: SMSF and ASX 200 total returns

Note: the different coloured sections show the impact of rebalancing.

Chart Appendix

Chart A-1: Market volatility

Notes: The solid black line depicts the average volatility since January 2010; the lower dotted line depicts the average volatility pre the GFC; the higher dotted line depicts the average level of volatility during the GFC - up to December 2009. The brown line is a daily estimate of the ASX 200 index volatility.

Chart A-4: 12-month capital gains forecasts

Notes: Each business day we update our estimates for capital gains on the ASX 200 for the following 12 months. For example, the left-most estimate on the vertical axis is a forecast for the 12 months concluding today. The right hand estimate is for the 12 months from today.

Chart A-2: Fear index

Notes: The fear index is a measure of 'excess' volatility denoting behaviour outside the open/close values each day. The two dotted lines depict the band in which the fear index resided before the GFC in two thirds of days. Extended periods below the lower dotted line might indicate complacency. Extended periods, or extreme values, of the index above the higher dotted line might indicate a propensity for the market to overreact in an irrational manner.

Chart A-5: Market exuberance

Notes: Exuberance is our measure of mispricing on the ASX 200. A value below the solid black line denotes the market is perceived to be cheap and above that line expensive. Experience suggests that exuberance above +6%, denoted by the dotted line, is an indicator of a potential correction of 6% to 10% - or for the market to move sideways for an extended period.

Chart A-3: Disorder index

Notes: The disorder index measures the degree to which the 11 sectors' daily returns move in harmony. The two dotted lines depict the band in which the disorder index resided before the GFC in two thirds of days. Extended periods below the lower dotted line might indicate belief that there is little information to have different impacts on different sectors. Extended periods, or extreme values, of the index above the higher dotted line might indicate investors and traders are lurching from sector to sector in search of a new trend.

Chart A-6: Sector exuberance

Notes: The estimates in this chart are based on the same notions as for Chart A-5. More detailed information on mispricing is contained in our companion weekly publication in the same section of our website

Glossary

Abenomics – Japan's Prime Minister Shinzo Abe came to power early in 2013 and has brought a new economic style to managing that economy.

ASX forecasts - We have further supplemented our forecasting process for the ASX 200 by including not just a forecast of the peak (at some unspecified time during the year) but also the low. Thus, we now have an end point (e-o-y forecast) and a range for the whole year. Naturally, on a rising market the low is more likely to occur earlier in the year and the high nearer the end. Since we publish our forecasts to the nearest 50 points to reduce the sense of false accuracy a change of just a couple of points can kick the forecast over by 50 points at around the 25 and 75 marks.

Australian debt ceiling – Labor brought in a debt ceiling in mid 2008 of \$75bn to self-impose some fiscal discipline during the onset of the GFC. Within seven months that ceiling was almost trebled to \$200bn and it has since been raised to \$300bn during Labor's term in office. Since before 2008 we had no debt ceiling that is equivalent to an infinite ceiling!!

Bad debt, good debt – Whether one is referring a household or national debt, the classification implies the following. Good debt is expected to produce income or other returns in the future – such as from infrastructure spending or buying a principal place of residence. Bad debt is used to finance 'recurrent' expenditure such as pensions or family holidays.

Black Friday – This term is used for the Friday after Thanksgiving in the US to denote the start of the shopping season for the holidays. Black refers to the accounts going back into the black from increased sales – it is certainly not a negative term!

Brexit – on 23rd July 2016 Britain voted to leave the European Union. The process is expected to take at least two years and negotiations must take place to engineer a smooth transition.

CAIXIN (formerly HSBC) flash PMI – CAIXIN publishes an alternative to the official PMI for China. It is based on a survey of predominantly small to medium sized firms – unlike the official version. The number on the 1st of the month gets much less attention than the official but the preliminary, or 'flash', reading gets attention as a read a week or two before the official numbers.

China's shadow banking – In essence, the China government dictates what all banks must lend at and pay for deposits. As a result, if a potential borrower is deemed too risky at the prevailing rate, the banks refuse to lend (rather than increase borrowing rates as may happen here). The 'failed' borrower may then seek funding from the shadow banking system that is not so regulated.

FOMC – The Federal Open Market Committee determines monetary policy in the United States. It can be thought of as being similar to our Reserve Bank board.

GOP – stands for Grand Old Party which is an alternative name for the US Republican Party.

High-Yield Sectors: by this, we mean Financials, Property, Telcos and Utilities.

International Monetary Fund (IMF) – Managing Director, Christine Lagarde (French), since 28th June 2011. The IMF is charged with fostering global monetary cooperation.

ISM - Institute of Supply Management produces a 'PMI-like' number for the US economy. Like the PMI, 50 is the cut off between improving and worsening expectations.

Long-run mispricing – Our measure is based on analysing trends over more than a century of data. The average period of over- or

under-pricing is about 18 months. That is, we do not expect the market to rapidly approach its fair value.

MYEFO (Mid-year economic and fiscal outcome) is a mid-year update on the Australian Budget situation – usually in December.

PMI – This acronym stands for Purchasing Managers Index. There is one for most countries and separate statistics for manufacturing and services. Manufacturing typically gets more attention. The official statistics are published in the first few days of each month – with China on the 1st. A reading less than 50 means the sector is decreasing in its growth rate – so if China growth slows from 8% to 7%, its PMI should be below 50. If the US speeds up from 2% to 2.5%, its PMI should be above 50. Note also the existence of the CAIXIN measure and its 'flash' or preliminary estimate.

Savings ratio – In Australia, the ratio of net savings to household disposable income defines the savings ratio.

Short-run mispricing – Our exuberance measure is our mispricing statistic reported in Chart 5. It is based on 12-month-ahead forecasts of the ASX 200. Please see the notes under Chart 5.

Tapering – It was the name given to the exit strategy from QE3. It is not a tightening monetary policy – just an increasingly less accommodative stimulus.

US non-farm payrolls data – are usually published on the first Friday of each month. They are generally considered to be the most reliable indicators for employment and unemployment in the US. Roughly speaking, a 200,000 increase in jobs is considered strong. Of course less new jobs are needed when the economy is running at full employment.

Key people

Australia – Prime Minister, Scott Morrison, (Liberal) since 24th August 2018; Treasurer, Josh Frydenberg, since 24th August 2018; Governor of the Reserve Bank of Australia (**RBA**), Dr Philip Lowe, since 18th September 2016.

China – President Prime Minister, Xi Jinping, since 14th November 2013; Premier, Li Keqiang since 15th March 2013; Yi Gang, President of the People's Bank of China (**POBC**) since March 2018.

Europe – President of the European Central Bank (**ECB**), Mario Draghi (Italian), since 1st November 2011 (Christine Lagarde from 1st November 2019); Chancellor of Germany, Dr Angela Merkel, since 22nd November 2005; President of France, Emmanuel Macron, since May 2017.

Japan – Prime Minister, Shinzo Abe, since 26th December 2012; Emperor, Akihito, enthroned 12th November 1990; Governor of the Bank of Japan (**BoJ**), Haruhiko Kuroda, since 20th March 2013.

New Zealand – Prime Minister, Jacinda Arden, October 2017; Governor of the Reserve Bank of New Zealand (**RBNZ**), Adrian Orr, since 27th March 2018.

United Kingdom – Prime Minister, Boris Johnson, since 24th July 2019; Chancellor of the Exchequer, Sajid David, since 24th July 2019; Governor of the Bank of England (**BoE**), Mark Carney (Canadian), since 1st July 2013.

United States of America – President, Donald Trump, from January 20th 2017 (4-year term); Chair of the Federal Reserve Bank (**Fed**), Jerome "Jay" Powell, since 5th February 2018 (4-year term)
